Treatment & Lifestyle Advice

Each section 2-4 sentences. End with:

"Disclaimer: This AI summary must be validated by a qualified clinician."

PATIENT:

- Age = 3
- Gender = Male
- Lesion location = Chin

AI FINDINGS:

- Ai model prediction = BKL (100.00% confidence)
- Ai model suggestion = LLE (90.00% confidence)

Diagnosis:

Based on the patient's symptoms and medical history, the AI model predicts that the lesion on the chin is

likely a benign keratosis (BKL).

Recommended Next Steps:

We recommend scheduling a follow-up appointment with a dermatologist to confirm the diagnosis and rule out any potential malignancies.

Precautions:

While the AI model suggests that the lesion is likely benign, it is essential to have a qualified clinician validate the diagnosis to ensure accurate treatment and prevent any potential complications.

Treatment & Lifestyle Advice:

If the diagnosis is confirmed, treatment options may include cryotherapy, topical creams, or observation. It is also crucial to practice good sun protection and avoid picking or scratching the lesion to prevent scarring and infection.
